*When looking at the Varicella Compliance Totals, the Hx/Dis tells you how many children in the age group had chickenpox. If you are completing a paper survey, you can add the Hx/Dis count to your total 2+ Varicella doses (See Example on page 5). If you are completing the online survey, you will need to go into the medical record to determine if a child received any Varicella immunizations prior to being diagnosed with the chickenpox to answer the questions and move forward.

The next section outlines the Dose Count Totals for each immunization. For each immunization, the cells in  will identify the numbers you add together to report for the appropriate age group. Any cell filled  are not to be reported in your total for any specific immunization.
